

Chemistry with passion

At this year's EUHA congress, the German silicone specialists from DETAX presented their latest product innovation: the new **basic A**[®] dosing syringes, measuring scoops are not needed anymore. Its supersoft consistency enables quick & easy kneading and homogeneous mixture – just like a child's play.

bioplast clear – the first genuinely transparent cold curing otoplastic silicone, with a final hardness of 60 shore A! Clearly an advantage, not only for aesthetics. Or **grip tool** – “seem within reach” – the smart mold for the quick fabrication of handles for all otoplastics made from silicone.

DETAX products are successful because they are based on good ideas, always offering a specific benefit. Our most important success factor is and remains **“the pure enthusiasm for the matter”** – from the first idea up to its implementation. That makes the difference.

We thank all visitors at our booth for the lively dialogue and we look forward to see you again in 2009!
